

# Heavy Light FZ

**Heavy Light FZ is the first and already legendary suit in the Ursuit dry suit series. It is manufactured of a very light three layer fabric. Despite the lightness, its durability is of the highest possible standard. The material reduces friction with water, and its lightness together with the telescopic design allows the internal air to be distributed evenly. Thanks to the machine PU-taped seams you will stay dry in all conditions.**

Heavy Light FZ is manufactured of a very light three layer fabric. Despite the lightness, its durability is of top quality. Surprisingly enough, the durability of the material comes from its lightness - the fabric "escapes" from sharp surfaces and minimizes wear and tear arising through friction. The outer surface profile gives less friction with water, and the lightness together with the telescopic design of the suit allows the internal air to be distributed evenly. All these features together create a light and comfortable suit.

Ergonomically fitting neoprene hood. The face seal allows use both with half and fullface masks. The swivelling inlet valve reduces the stress on the hose.

The front zipper allows you easily to dress the suit without outside help. The cover on the zipper protects the jacket from rubbing and keeps the zipper clean from sand and dirt.

Automatic outlet valve of low profile type is provided with filter and it's therefore easy to keep clean and other additional equipments can easily be attached. Under the inlet valve is a neopren padding that divides incoming cold air evenly inside the suit.

Inside the suit there are integrated suspenders and together with the crotch strap they form a telescope waist. Thanks to the telescopic waist construction, the ergonomics of the suit feels like normal fabric.

D-rings inside the pockets, to which for example a light can be attached. Heat pressed knee, back and elbow reinforcements. 4mm neoprene boots with latex surface reduce the need for extra insulation. Right sizing prevents additional air from getting into the boots, which would create buoyancy. Heel strap retainers keep the fins safely in place.

## Technical Details

- Front zipper with protective zipper cover
- Seam structure: doubleside taped patented seam structure
- Material: black trilaminate 230g/m2
- Integrated black 5mm neoprene hood
- Face seal 4mm sandwich-neoprene
- Automatic outlet valve of low profile type
- Swiveling inlet valve (INT)
- Heat pressed knee and back reinforcements
- 4 mm neoprene boots with latex surface
- Integrated suspenders and loops for drying
- D-rings on both sides
- Latex neck seal
- Wrist seals are made of heavy duty latex. Bottleneck shaped with protection.
- Thigh pocket on right side with velcro tape
- Includes carrying / storage bag
- Includes inlet house, cap, zip wax, talcum bottle and repair patches

## Accessories

- Relief zipper
- Pee valve
- Pockets for knife, light, (other than std), compass or map pocket.
- Integrated independent air system for suit gases fitted on the thigh (argon)
- Attached gloves and / or wrist rings
- The standard boot can be replaced by a sock made of 4 mm compressed neoprene (to be used with our Tactical Trek Boots) or with the light model Tech Dry boots
- Can be made with separate hood
- The size and / or model of the boots, hood, and seals can be chosen when ordering
- The valve and hose type can be chosen to fit the coming use

## Type approvals

- CE certificate

## Size

- Unisex: S, M, L, XL, XXL
- Women: S, M, L
